# Warnings

- Please prevent children from operating the device without supervision.
- Please unfold the device and adjust the camera head with one hand placing on the base and the other hand holding the case of camera head.
- Please do not look directly to the LED lamp to prevent your eyes from being damaged.
- When allocating the device, please hold the base with both hands. Do not carry the device by the gooseneck flexible tube or camera head with one hand.
- Please prevent the camera head to hit the desk top or any other hard objects, or it can be damaged easily.
- Please do not twist the gooseneck flexible tube.
- Please be careful not to spill liquid on the control panel keys.
- When the device is not in use for a while, please turn off the power.

# **Portable Visualizer**

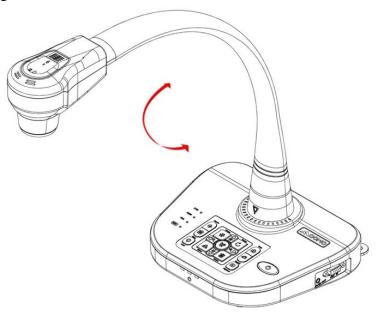

The section explains how to set up, adjust the device to meet your needs.

#### Camera Head

Please hold the camera head and adjust it to the position where you want to shoot the image.

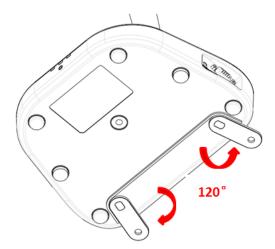

#### Gooseneck

Bend the gooseneck flexible tube gently by hand and place the camera head to the preferable height and orientation.

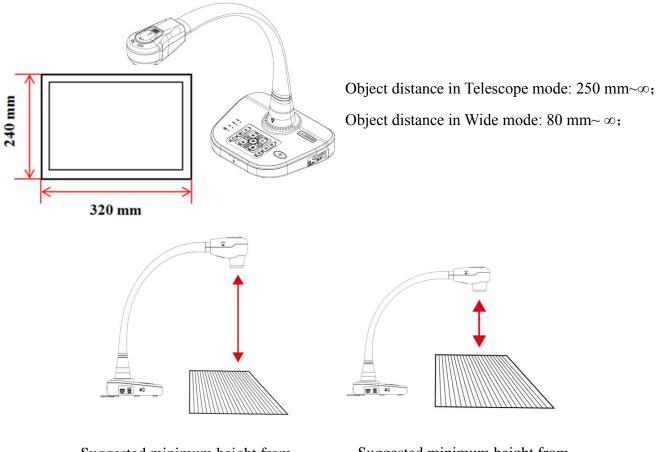

#### ■ Support Stand

Unfold the support stand of the base to prevent the device from failing backward.

# **Recommended Working Environment**

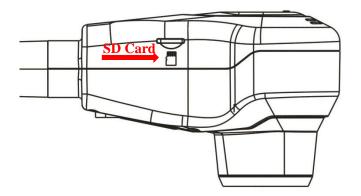

Suggested minimum height from device in telescope mode: 250 mm

Suggested minimum height from device in wide mode: 80 mm

# Note: When the distance between object and camera is from 10 mm to 80 mm, please switch to Micro mode.

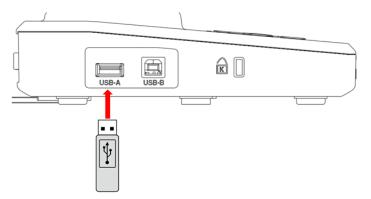

If you do not select a working environment and placement according to the recommendation described above, please use the rotation ( $^{\circ}$ ) key of the control panel or the remote control to adjust the orientation.

## **Insert and Remove Micro SD Card (not supplied)**

- Insert the Micro SD card into the SD card slot on top of document camera. The images and files in internal memory can be copied to SD card or the capture image can be saved in the SD card.
- 2. The capture image will save to SD card instead of internal memory.
- 3. Push SD card lightly with your finger, the SD card can be removed.

## **USB Flash Drive (not supplied)**

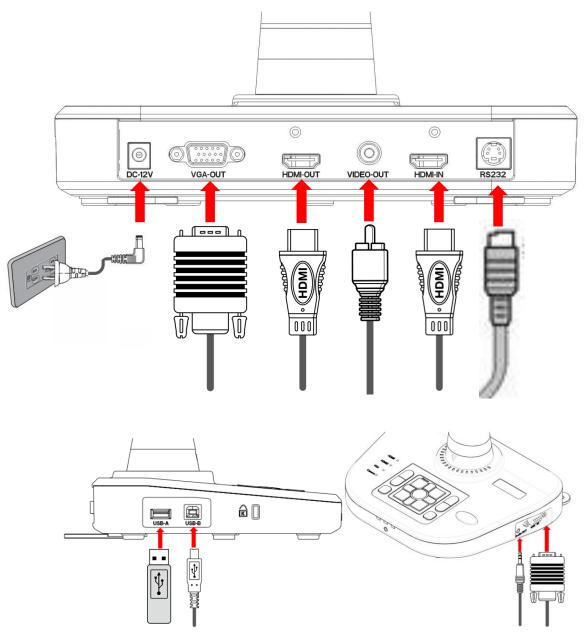

When USB flash drive plugs in USB Type-A successfully, the capture image and video can be saved in the flash drive.

Note: When USB flash drive and micro SD card are both connected, USB flash drive storage priority is higher than SD card.

# **Connect Portable Visualizer to external equipment**

#### System connection diagram

Connecting the power cord

Plug in the power adapter to the device DC 12V IN power socket first and then connect the AC power cord to a 100V~240V AC power source.

Note: The plug type of AC cord varies depending on the countries and regions where you are in.

#### Making the connection

|        | -           | PAL          | 720x576             |

#### **HD TV**

Connecting the HDMI output

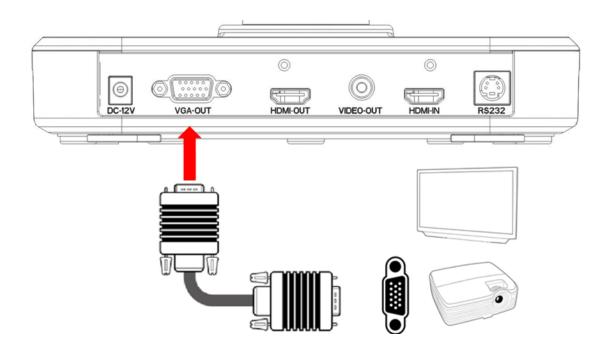

Use a HDMI cable to connect the HDMI output port of the device with the HDMI input port of TV or Projector.

#### ■ Standard TV

Connecting the VGA output port

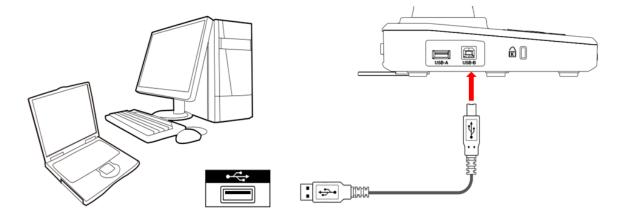

Use a VGA cable to connect the VGA OUT port of the device with the VGA input port of TV or projector.

Note: Use Source Button to switch between modes.

#### ■ Using USB connection

Press Menu > System Setting > USB to PC > PC Camera

# **Basic Operation**

- 1. Press MENU ( $\square$ ) on the control panel or ( $\square$ ) on the remote control.
- 2. Use  $(\wedge / \vee / \langle / \rangle)$  to make a selection and adjust the setting.
- 3. Press OK button ( $\frac{Auto}{OK}$ ) to make the new setting activated.
- 4. Press the MENU ( $\blacksquare$ ) button to hide the OSD menu.

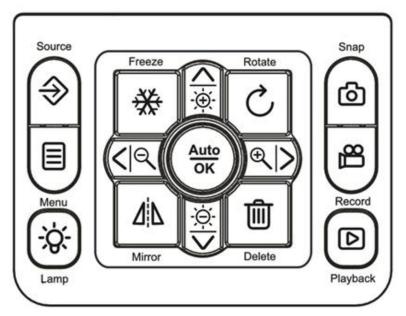

| OSD MENU       |        |                  |  |  |
|----------------|--------|------------------|--|--|

#### ■ Recording videos and capturing images

- 1. Please choose the focus mode according to the distance to object: Telescope mode for 250 mm to  $\infty$ ; wide mode: 80 mm to  $\infty$ ; Micro mode for 10 mm to 80 mm.
- 2. Use the Left/Right buttons ( $\langle \rangle \rangle$ ) to adjust the image size.

- 3. Use the Auto Focus button to adjust the focus automatically. Use the Manual Focus button to adjust the focus manually.
- 4. Use the video button ( $\overset{\frown}{P}$ ) to begin recording a video. Press the button again to stop recording.
- 5. Use Snap button ( ) to capture an image.

#### Note: You need insert SD card or USB drive first in order to take a video record.

#### Play

- 1. Use the Playback button (**D**). The latest captured image or video will be displayed.
- 2. Use Left/Right buttons ( $\langle \rangle \rangle$ ) to select the file to be displayed.

3. Press OK ( $\frac{Auto}{OK}$ ) button.

# **Advanced Functions**

#### **Mask function**

You can use the Mask function key to block the area that you do not wish to display;

- 1. Use the Menu () button on the control panel or the remote control to show the menu.
- 2. Use the arrow buttons to select Mask: Menu>Function>Mask.

Note: Use the Menu ( =)>Effect Setting>Mask setting to set the size of Mask.

#### Highlight Line function

You can use the Highlight Line function to mark those functions with a cross line.

- 1. Use the Menu () button on the control panel or the remote control to show the menu.
- 2. Use the arrow buttons to make your selection: Menu>Function>Highlight Line.

#### Time-lapse photography

You can produce the time-lapse video with video maker software.

- 1. Use the Menu () button on the control panel or the remote control to show the menu.
- 2. Use the arrow buttons to make your selection: Menu>Delay Photography.

#### ■ Transfer the captured image to computer

Please note all recorded videos are in AVI format and saved under the file name format of xxxx.avi.

Please turn on the power of the device first.

- 1. Use a USB cable to connect the device with a computer.
- 2. Use MENU (=) > System Setting > USB to PC > Mass storage to detect SD card memory.

Use the computer software to view images on the SD card or simply cut and paste the image to the computer.

Note: When the control panel or the remote control is in operation, please do not unplug the USB cable to prevent the device from malfunction.

### Use the device as a camera

Start the settings

- Connect the device with the computer through USB Type-B: Turn on the power of your computer, and use the USB cable to connect the device with the USB port of your computer. Please confirm the USB is connected correctly.
- 2. Press Menu > System Setting > USB to PC > PC Camera
- 3. After connecting the device with your computer, when the computer detects the camera, the connection is therefore successfully established. You may use the installed software and start the camera functions (for example: Skype).

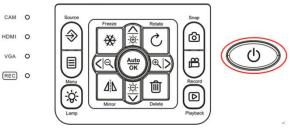

#### ■ Connecting the microscope

To connect the device with a microscope can display microscopic objects on a large screen.

- 1. Adjust the microscope and the objects to be focused.
- 2. Please select a proper microscope adapter.
- 3. First, install the microscope adapter on the lens of device.
- 4. Switch to Micro mode. Press Menu> Effect setting> Micro Mode ON.
- 5. After the microscope adapter is installed on the camera head, connect the camera head with an ocular lens.
  - If the image on the presentation screen is blurry, please adjust the focus of the microscope.
  - Please use the Auto Focus button on the control panel or the Manual Focus button on the remote control to conduct the micro focus.

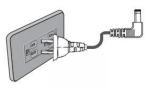

# Storage

1. Please turn off the power of the device.

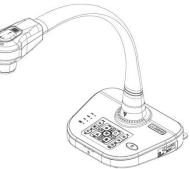

2. Please unplug and remove the power cord and

all other cables from the device.

3. Please refer to the diagram to the right to fold the gooseneck flexible tube for storage.

| Problem  | Possible causes   | Solutions   |
|--|---|---|
| The device does not<br>turn on in normal<br>condition.         | The power adapter is not<br>connected correctly to the device<br>or the power socket.             | Make sure the power<br>adapter is connected<br>correctly to the device and<br>power socket.                         |
| The device is unable<br>to capture images or<br>record videos. | The device has insufficient memory.   | Remove some files and<br>clear up the memory space<br>of SD card/ USB flash<br>drive or built-in memory.            |
|  | The SD card is protected.   | Reset the SD card to be writable.   |
| After the device is<br>connected, there is<br>no image output. | The device is not connected to the external equipment correctly.                                  | Re-connect the device with the external equipment.  |
|  | The external equipment is not selected correctly.   | Select the correct external equipment.  |
|  | The resolution of the external equipment is set incorrectly.                                      | Reset the resolution of the external equipment.   |
|  | The device is not switched to the correct source of signals.                                      | Switch to the correct source of signals.  |
|  | The computer transfer key (VGA) is activated.   | Press the source of signal (CAM).   |
|  | HDMI is activated.  | Press the source of signal(CAM)   |
| The captured image is too blurry.                              |   | Use Auto Focus or Manual<br>Focus to adjust the focus.  |
|  | The object to be photographed<br>may be too close to the camera<br>head.                          | If the distance for<br>photographing is less than<br>20cm, please switch the<br>focus mode to Micro<br>mode.        |
| The image is upside down.                                      | The objects are not placed in the recommended working environment.                                | Press the image Rotation<br>key to adjust the display<br>orientation.   |
| The image cannot be moved around.                              | The image cannot be moved<br>around because the Freeze<br>function of the device is<br>activated. | Press again the Freeze<br>function key on the control<br>panel or the remote control<br>to deactivate the function. |
| The remote control does not respond.                           | The battery runs out.   | Please replace with a new battery.  |
|  | Objects are located between the remote control and the device                                     | Please remove the objects that block the  |

# **Problems and Solutions**

| and block the communication signals.                               | communication signals.   |
|--|--|
| The distance between the remote control and the device is too far. | Please shorten the distance<br>between the remote control<br>and the device. |
